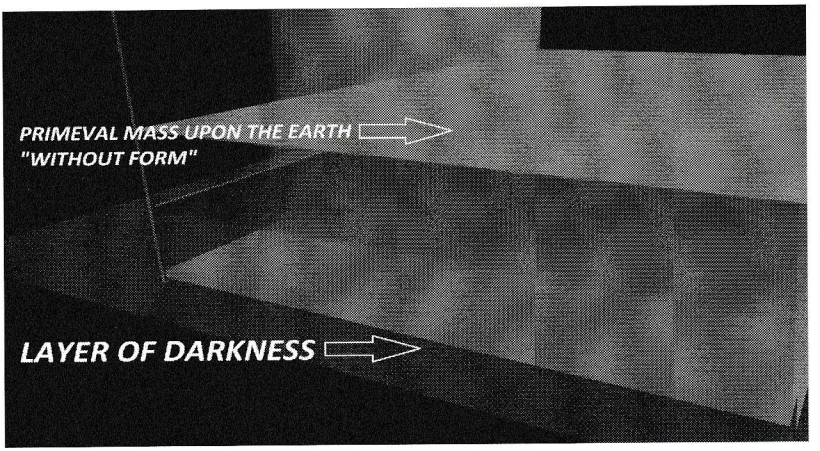
CHAPTER 7

THE WORD OF GOD

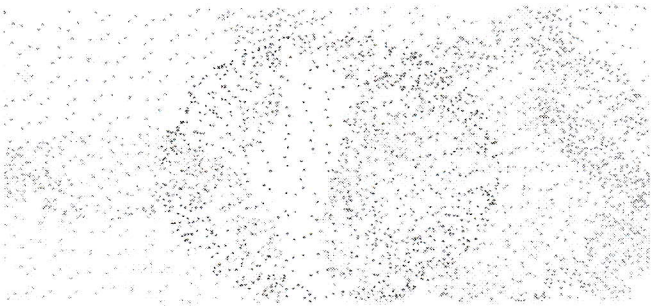
Creation of Sand and Rocks



Pic.1

At some point in the creation process, God created Light and Darkness; He gathered Light at the extreme top of the universe, and Darkness at the extreme bottom. From there, God took Darkness (physical matter) and diffused it over the surface of the Earth. But at that point, there were no chemical compounds or molecules yet - no sand, no rocks, no earth-mass as we know it – only a layer of formless primeval mass consisting of atoms. Genesis refers to this chaotic state of matter in the early stages of Creation as being "without form" ("... the Earth was void and without form").

PRIMEVAL MASS CONSISTING OF ATOMIC ELEMENTS

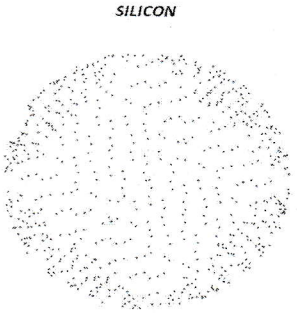


Pic.2

Picture 2 illustrates the primeval mass consisting of atomic elements. All dots are atoms; different colors mark different elements. In order for an Earth mass as we know it to form out the primeval chaotic mass, something has to happen - all of the atomic mass has to be assembled to compounds, molecules, and to solid matter - and this can only be achieved by inducing an aethereal vibration which would gather all elements of the atomic table to compounds, and to solid rocks. The named process is accurately described by God in the Book of Enoch:

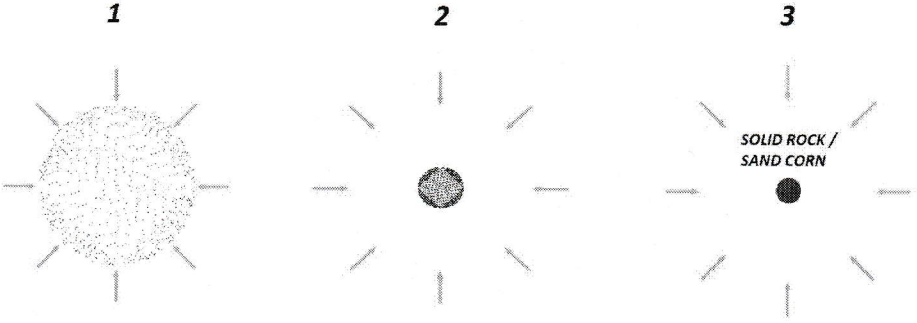
"And I said, 'Let the lower water, which is below heaven, collect itself into one collection, and let its waves become dry.' And it happened like that. ***From the waves I created rocks****, solid and big.*

Before creating rocks, God gathers all waters into one place, which is in a separate sub-domain. Then, God activates an aethereal frequency. Note that the term "waves" in the verse above is referred to vibration. God activates an additional aethereal vibration which makes all elements gather together. Let's take the second most abundant element on Earth, namely, silicon for our example.



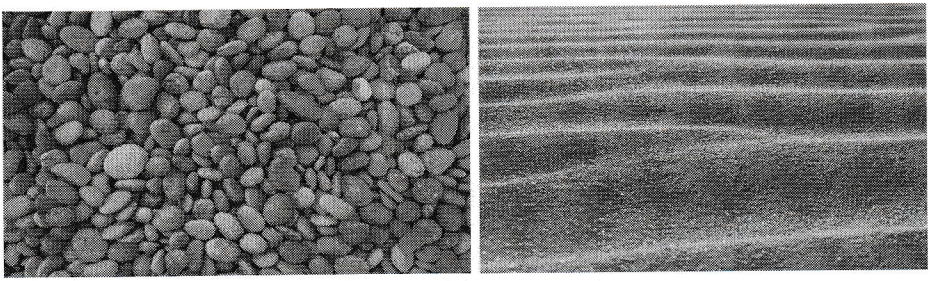
Pic.3

Picture 3 depicts a cloud-like accumulation of the element silicon. All of the dots are silicon atoms.



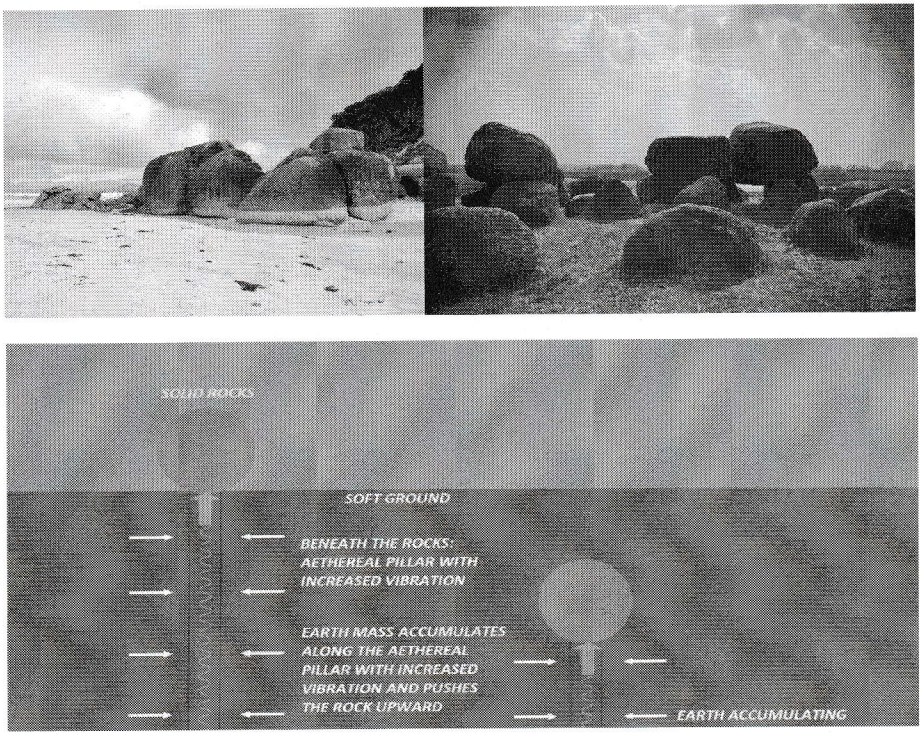
Pic.4

As God activates the additional aethereal vibration, all atoms begin to gather into one continuous, solid object (steps 1-3).



Picture 4: The silicon atoms finally form one continuous, solid rock as we know them today. Rocks, sand, dust, earth, crystals, metals – everything was once an atomic mass without form until an additional aethereal frequency forced each element into solid formations.

Why Stones and Rocks are on the Surface

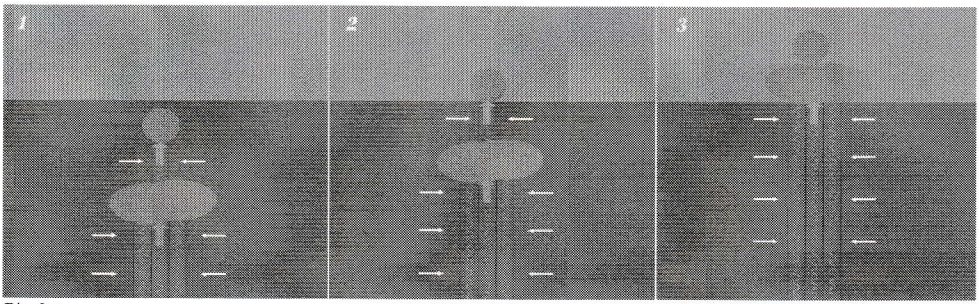


Pic.5

As we know, rocks are more dense and solid than Earth. According to the laws of physics, rocks should always sink into the Earth due to the fact that they are more dense and more heavy than the medium which supports them, yet we observe the opposite. Giant, heavy rocks lie on the surface forever, without ever sinking in. Picture 5: There is an increased aethereal vibration (aethereal pillars) right below the rocks. This aethereal vibration creates a constant accumulation of earth-mass along the aethereal pillars with the increased vibration - it's this constant accumulation of earth-mass beneath the rocks which continually pushes the rock upwards to the surface, and holds it above the surface.

Rocks Lying upon Rocks

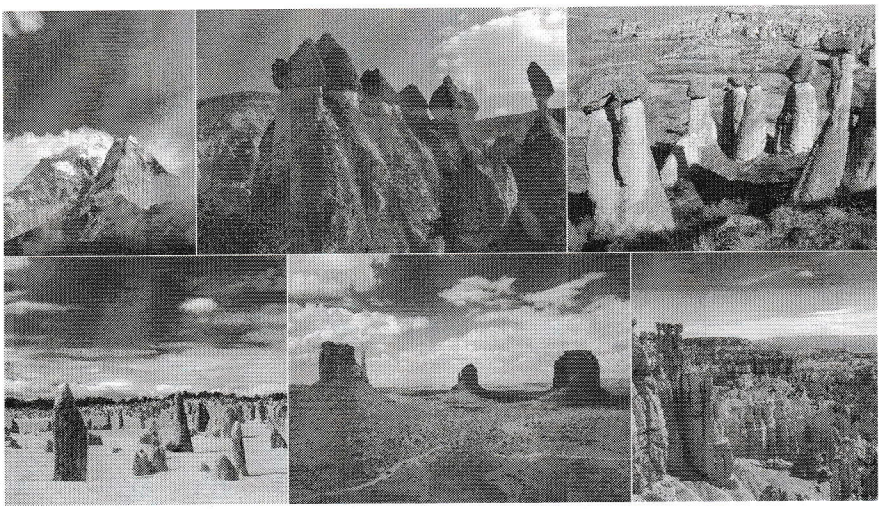
Everyone has seen rocks lying upon other rocks. The rocks can be small; they can be huge and heavy. The question is, How did they get up there? - It's the same principle of accumulation of earth-mass beneath the rocks which pushes them upwards. The rocks lying on top of other rocks have been lifted by the emerging rock beneath them.



Pic.6

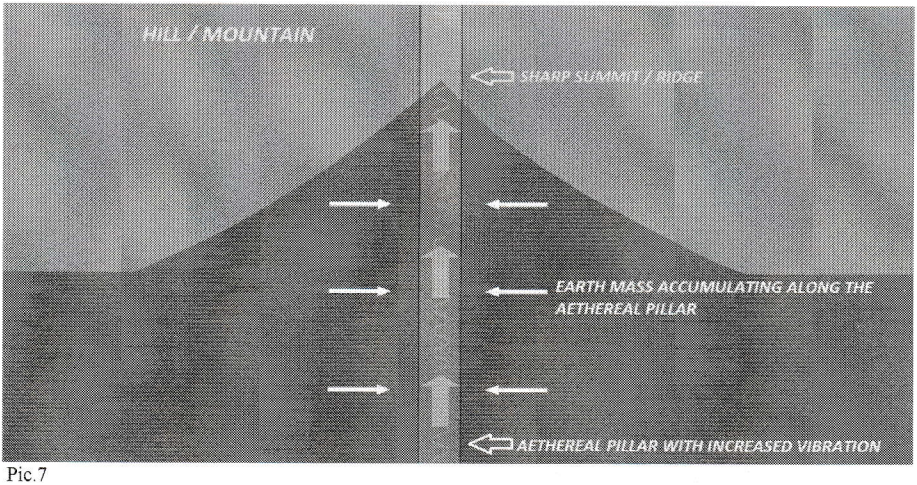
Picture 6: Three stages – Stage 1: Two rocks beneath the surface are being pushed upwards by a constant accumulation of earth beneath them, which is caused by aethereal pillars with increased aethereal vibration. Stage 2: The upper rock reaches the surface first. Stage 3: The second rock reaches the surface and lifts the first rock.

Mountains and Rock Formations



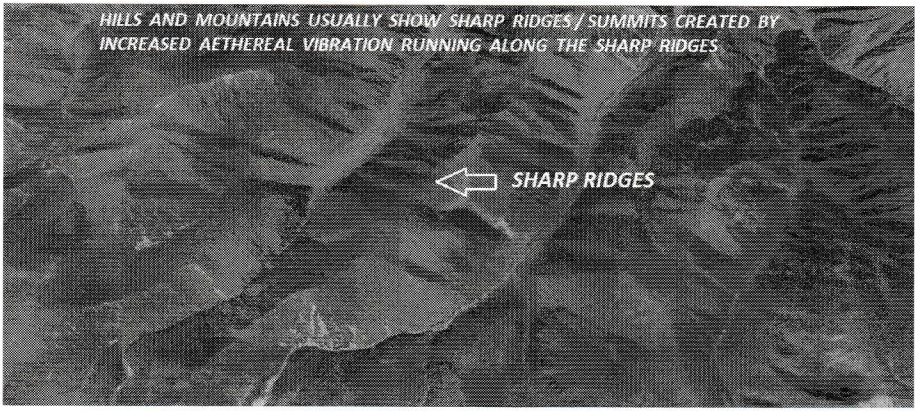
All rocks and rocky mountains are accumulations of silicon. Aethereal vibration caused huge amounts of silicon to assemble to giant rocks growing out of the Earth to form rocky pillars and mountains with sharp summits. Notice that some rocks formations and mountains have separate rocks lying upon them. There are huge rocks weighing several tons at the highest elevations of rocky mountain formations. You can, for example, see loose and spherical rocks at latitudes of 5, 6 or more kilometers above sea level in the rocky landscape of Mount Everest – there is no scientific explanation for the presence of rocks lying upon other rocks, or for rocks being at high elevations in rocky mountain areas. The real explanation is – All rocks and rocky mountains , at some point, have grown out of the Earth; rocks which are lying on other rocks have been lifted up by the emerging rocks.

Hills, Mountains, and Sand Dunes



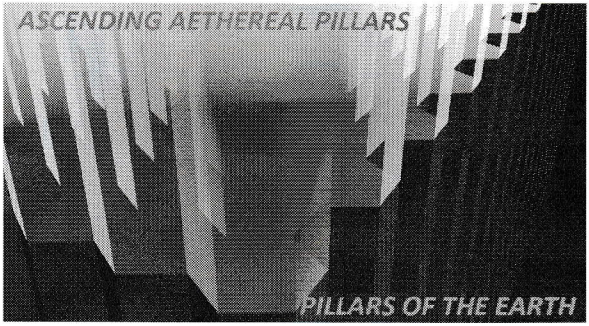
HILL / MOUNTAIN
SHARP SUMMIT / RIDGE
EARTH MASS ACCUMULATING ALONG THE AETHEREAL PILLAR
AETHEREAL PILLAR WITH INCREASED VIBRATION

Pic.7



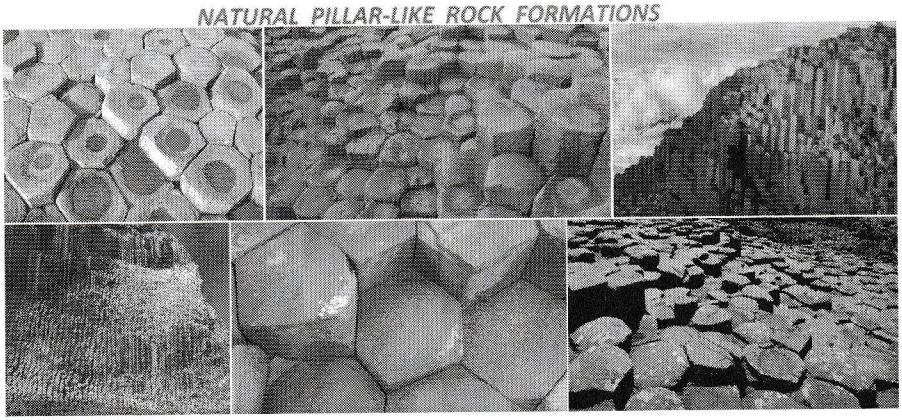
HILLS AND MOUNTAINS USUALLY SHOW SHARP RIDGES / SUMMITS CREATED BY INCREASED AETHEREAL VIBRATION RUNNING ALONG THE SHARP RIDGES
SHARP RIDGES

Mountains usually have sharp ridges. The ridges run along a continuous set of aethereal pillars with increased vibration. Mountains and hills are accumulations of earth-mass along aethereal pillars, as shown in picture 7.



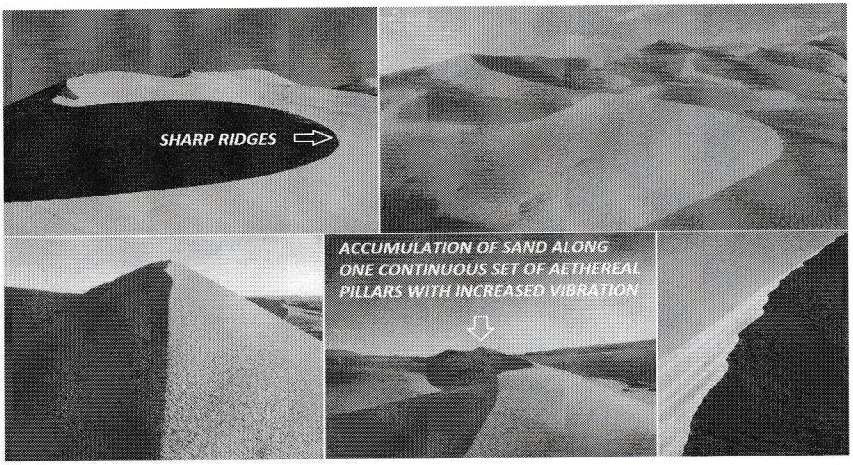
Hills and mountains have their own "foundations", or pillars. This is clearly stated several times in the Bible:

*"Then the earth shook and trembled; **the foundations also of the hills** moved and were shaken, because he was wroth." Psalm 18 : 7*



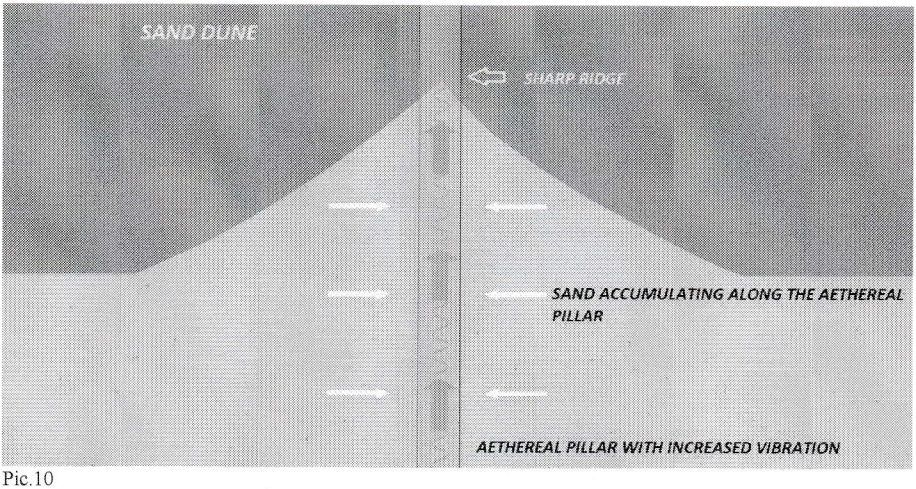
Pic.8

Hexagonal pillar-like rock formations is a solid argument that rocks and mountains are shaped by aethereal pillars of hexagonal shape. The hexagonal rocks, although not precisely, adapt hexagonal aethereal pillars.



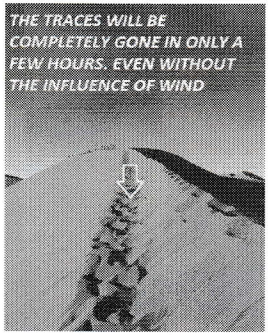
Pic.9

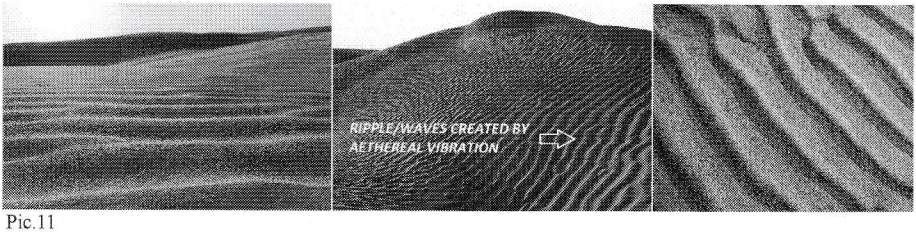
The principle of accumulation along aethereal pillars is clearly demonstrated in sand dunes. Sand dunes show especially sharp ridges which mark the top of the dunes.



Pic.10

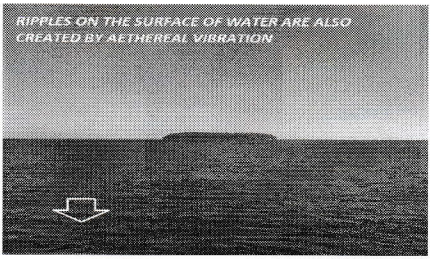
A sand dune is an accumulation of sand along one continuous set of aethereal pillars with increased vibration. The ridge of a sand dune marks the line of the increased vibration. If you walk along the ridge of a dune, the imprints will be gone after only a few hours, the dune will level out, and the sharp ridge will be restored, even if there is no wind blowing. This is due to a constant aethereal vibration which holds the dunes in their typical shape.





Pic.11

Have you ever noticed these wave-like structures on the surface of sand? The surface of sand almost always adopts a wave like structure similar to the surface of water. This can be observed on land, as well as under water. Sand forms the same patterns at the bottom of the see. These is another piece of evidence for the presence of aethereal vibration.



The ripples typical for the surface of seas, lakes, and larger water bodies are the

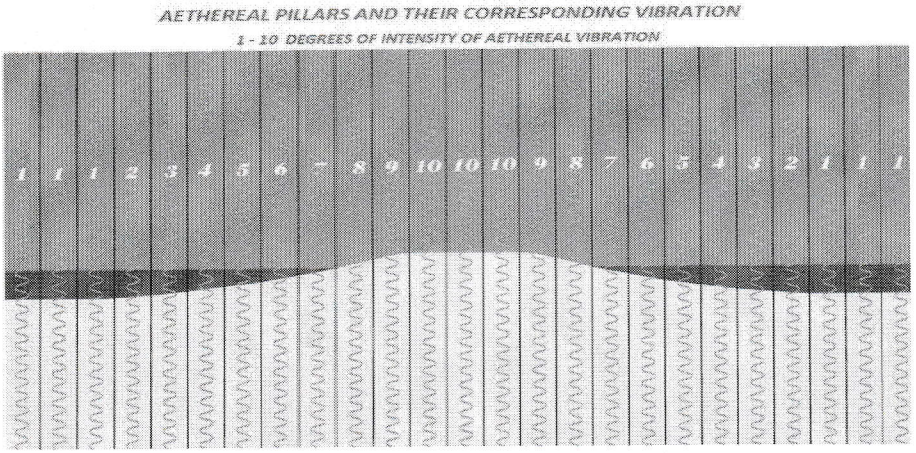
creation of aethereal vibration ascending from the pillars of the Earth in pillar-like aethereal columns. During the day, aethereal vibration decreases and increases, which is why the surface is sometimes calm and smooth, and sometimes wavy. The waves are not caused by the wind, although it may create the illusion, as wind is also the result of an increase in aethereal vibration. This is why waves on the water surface and wind often occur simultaneously. Nevertheless, wind does not create the little ripples on the surface - aethereal vibration does.

God's Decree for the Waters

From the waves I created rocks, solid and big. ***From the rocks I assembled dry land, and I called the dry land earth****. What was in the middle of the earth, I called chasm. The sea I gathered into one place, and I bound it with a yoke. And I said to the sea: 'Behold,* ***I give you an eternal boundary. You will not break through your own waters****.' So I fixed the solid structure.*

The Second Book of Enoch

After creating sand, dust, and earth as we know it, God causes the aethereal vibration to increase in some areas, which creates an additional accumulation of sand and earth-mass in those areas. This accumulation causes the earth-mass to rise out of the waters and become dry land. All dry land, just like mountains and hills, is an accumulation of earth-mass induced by aethereal vibration.



AETHEREAL PILLARS AND THEIR CORRESPONDING VIBRATION
1 - 10 DEGREES OF INTENSITY OF AETHEREAL VIBRATION
1 1 1 2 3 4 5 6 7 8 9 10 10 10 9 8 7 6 5 4 3 2 1 1 1

Pic.12

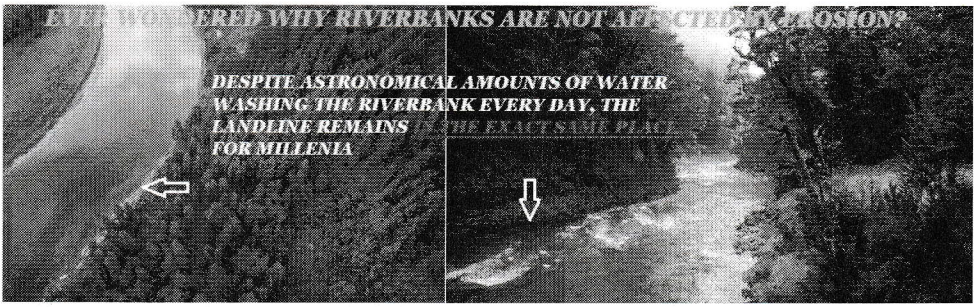
Picture 12 illustrates an island (dry land) in the sea. It also shows aethereal

pillars of different degrees of vibration. The degrees have an abstract scale from 1-10; 10 is the strongest vibration; 1 is the weakest. Dry land is where aethereal vibration is strongest. The three aethereal pillars with the degree of 10 are the highest points of land mass due to the highest degree of aethereal vibration, as aethereal vibration causes an accumulation – dry land and islands are accumulations of earth-mass and sand. This is what's happening in the picture 12 - the higher the degree of vibration, the more earth-mass/sand is accumulating. Consequently, the earth-mass emerges upwards and dry land appears. The areas with aethereal vibration of 1 have the lowest level and remain below sea level (in this picture). A shoreline essentially describes a gradual increase of aethereal vibration - the more the vibration increases, the higher the land mass assembles.

The verse above states that God fixed all shorelines and gave an eternal boundary to the waters, which they cannot break. And he established the boundary by aethereal vibration. All shorelines and riverbanks are fixed by aethereal pillars vibration.

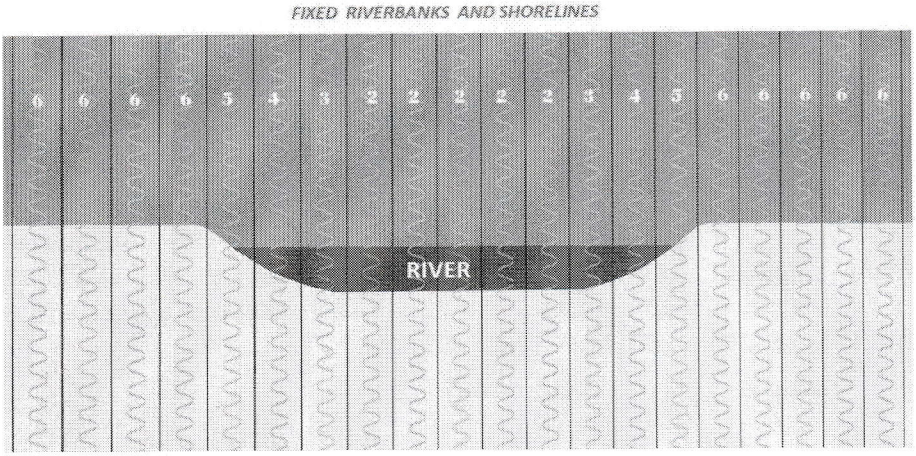
*Fear ye not me? saith the Lord: will ye not tremble at my presence, **which have placed the sand for the bound of the sea by a perpetual decree, that it cannot pass it: and though the waves thereof toss themselves, yet can they not prevail; though they roar, yet can they not pass over it?***

Jeremiah 5 : 22



Have you ever wondered why rivers never get washed out and get wider over time? Did you know that rivers are one of the biggest mysteries – scientists have no (real) explanation as to why rivers keep running without coming to a halt. But that's not the only peculiarity – the even bigger question is, Why does water not progress into the land over time? A riverbank consisting of soft earth-mass can be washed by water 24/7, over thousands of years, yet the shoreline does not retreat by one single inch into the land, but always remains in the exact

same place. The river Rhine has many shorelines that are comprised of brown, soft earth-mass. And all of it is being washed day by day, year by year by astronomical amounts of water rushing down the river. "Normally," you should be able to see the shoreline literally "melt away" and retreat several inches per day, if not per hour; but that's not what's happening – why is the Rhine river so interesting for us? - Because the Rhine has the exact same shorelines as it had 2000 years ago, when the area was part of the Roman Empire – the Rhine, and rivers in general, are not affected by erosion from water washing their riverbanks 24/7, year by year, century by century – never. No heliocentric scientist can explain this phenomenon.

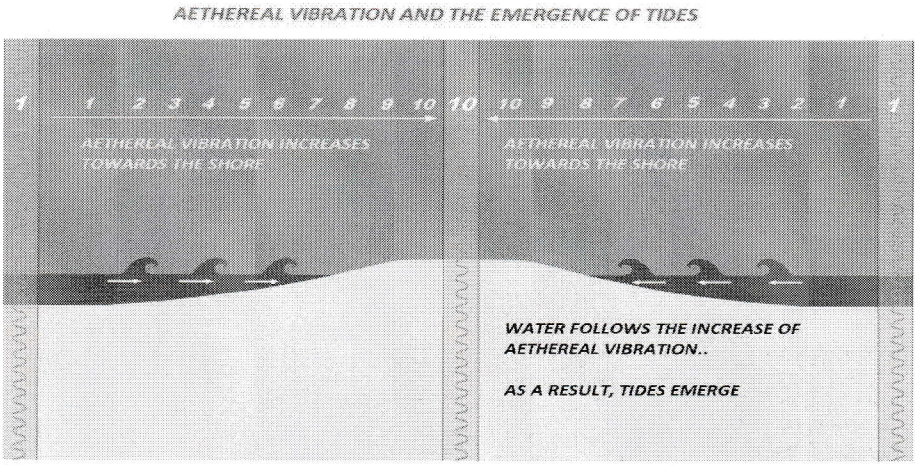


Pic.13

But that doesn't mean that there is no explanation – the problem is that science denies the presence of the aether, and of the pillars of the Earth. Riverbanks are held in place by aethereal pillars with increased vibration. Picture 13: The bottom of the river has the "weakest" aethereal vibration. The vibration increases towards the riverbanks, and it's this aethereal vibration which holds the shorelines in place. Technically, it's not the shorelines of the river that have the increased vibration, it's the other way around – it's the riverbed that has a reduced vibration. A riverbed is a line which has a weaker aethereal vibration than the surrounding area.

Another big question is, Why do rivers flow? There is no scientific explanation for the perpetual flow of rivers – again, only because science is denying the aether and the pillars of the Earth. Water is dragged by the aether. Planets interact with the aether, and as they are moving from east to west, they create an aethereal drag which pulls the rivers. We are going to elaborate this further in a future work.

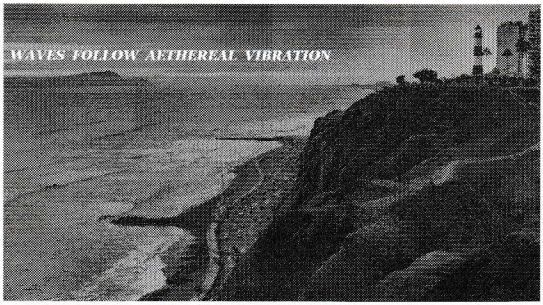
Tides



AETHEREAL VIBRATION AND THE EMERGENCE OF TIDES
1 1 2 3 4 5 6 7 8 9 10 10 10 9 8 7 6 5 4 3 2 1 1
AETHEREAL VIBRATION INCREASES TOWARDS THE SHORE
AETHEREAL VIBRATION INCREASES TOWARDS THE SHORE
WATER FOLLOWS THE INCREASE OF AETHEREAL VIBRATION..
AS A RESULT, TIDES EMERGE

Pic.14

Picture 14: The aethereal vibration increases towards the center of the island. Water is drawn to the island, as water responds to aethereal vibration. The surrounding water mass constantly flows to the shore and forms tides which continuously wash the shoreline, but never break through the perpetual boundary.



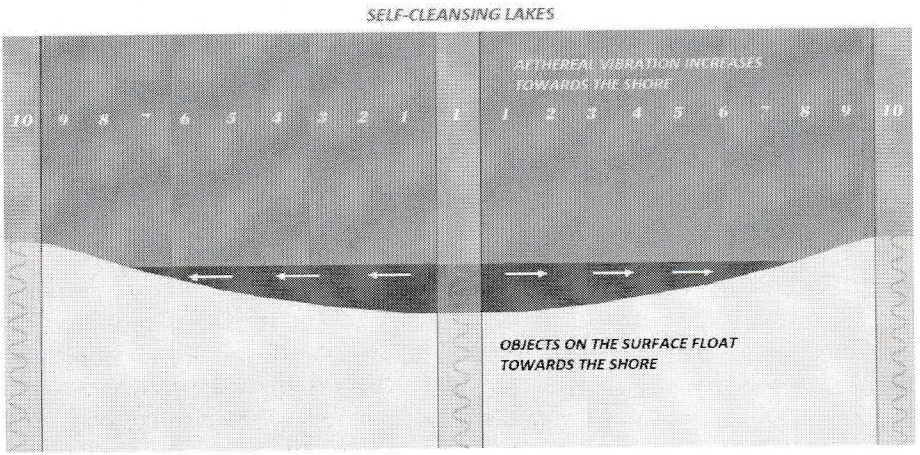
According to the laws of physics, tides should wash out the shorelines after a short period of time. Every single tide would contribute to the erosion of the shore. Consequently, the water would increasingly advance into the dry land, which never happens in reality. It's a well-known fact that shorelines and riverbanks never give away land to the waters. Tides wash the shores for millenia, but never break their perpetual decree. The Nile has the same riverbanks today as it had in the days of the Pharaohs thousands of years ago. The same can be said about every major river.

"When he gave to the sea his decree, that the waters should not pass his commandment: when he appointed ***the foundations of the earth.*** *"*

Proverbs 8 : 29

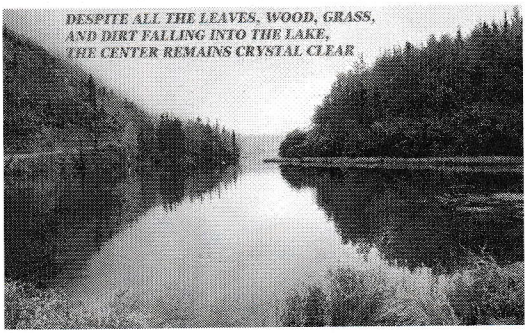
Self-cleansing Lakes

Natural lakes have the property to cleanse themselves. Have you ever noticed that the center of the lake is always clean from leaves, wood, dirt, and other objects? This is because all object on the water surface of a natural lake strive towards the shoreline. When you're standing on the shore of a lake, you can see how leaves, fume, pieces of wood, and dirt slowly drift towards the shorelines.



SELF-CLEANSING LAKES
AETHEREAL VIBRATION INCREASES TOWARDS THE SHORE
10 9 8 7 6 5 4 3 2 1
1 2 3 4 5 6 7 8 9 10
OBJECTS ON THE SURFACE FLOAT TOWARDS THE SHORE

Pic.15

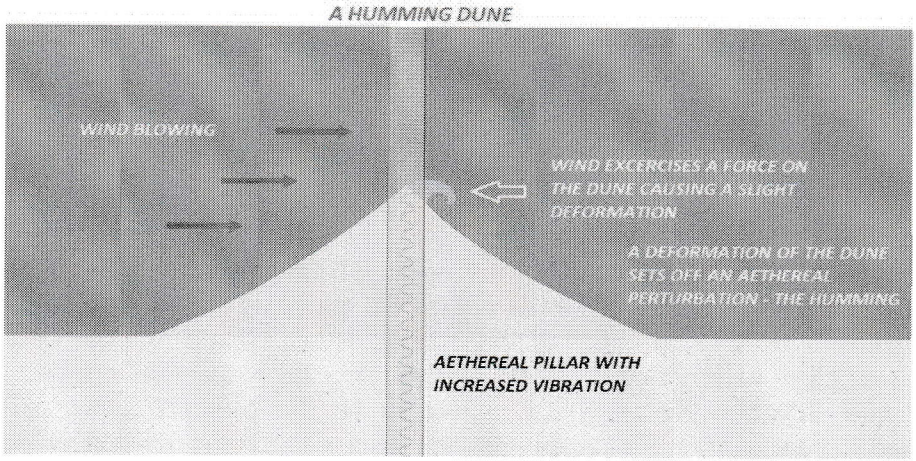


If you drop an object in the middle of the lake, you can bet that it will get washed to the next shore the same day or the next, depending on the size of the lake. This is nothing less than the aether-force pulling all objects to the shore, as the vibration always increases towards the shoreline, at least in natural lakes.

Booming and Singing Dunes

Booming and singing dunes is a phenomenon known throughout the world. Some sand dunes are known to produce a deep and loud humming noise under right conditions. After years of research, scientists still have no explanation for

the mysterious sounds, unless you believe the official theory of tiny sand particles rubbing against each other and producing a sound that could be compared to a low flying jet.



A HUMMING DUNE
WIND BLOWING
WIND EXCERCISES A FORCE ON THE DUNE CAUSING A SLIGHT DEFORMATION
A DEFORMATION OF THE DUNE SETS OFF AN AETHEREAL PERTURBATION - THE HUMMING
AETHEREAL PILLAR WITH INCREASED VIBRATION

Pic.16

Aethereal pillars permeate and suffuse the entire created universe. The pillars of the Earth are vibrating at a very high frequency; to high to be picked up by the ear. Nevertheless, we can hear some of the aethereal vibration surrounding us; do the following experiment - go into an empty and silent room, preferably at night, and try to isolate yourself from all noises. As soon as you have eliminated all sounds around you, try to focus on the "sound of silence" and you will begin to hear a high white noise all around you. The more you're focusing on it, the louder and clearer it gets. It's not the sound of the own blood circulation- it's the sound of the aether, and it's also the same force that keeps atoms together, makes metals and rocks firm; and creates hills, mountains, and dunes. Technically, this vibration could be so loud that it would instantly knock us to the ground, make glass burst, and set off alarm systems, but fortunately it's to high to create the named effects. However, there are cases when the frequency of aethereal vibration is being slowed down and we can hear a loud humming.

A sand dune is held together by aethereal vibration. When the sand dune is exposed to external forces and deformations, it affect the aethereal pillars of the dune as well, as there is a mutual correlation between the aethereal pillars and the shape of the dune that they create. If there is a force acting upon the dune and causing a deformation, it creates perturbations in the aether as well. That is, the frequency of the aethereal pillars is being slowed down and we hear a deep humming coming out of "nowhere".

One such external force is winds. Winds push agains the dunes and blow off

sand from the top. Consequently, the aethereal pillars respond to the deformation with perturbations, which we hear as a deep and loud humming. But wind causes only minor deformations - avalanches caused by people, for example, can produce a sound comparable to a low flying jumbo jet followed by a vibration of the ground. All of the sounds and ground vibrations coming from dunes are perturbations in the aether.

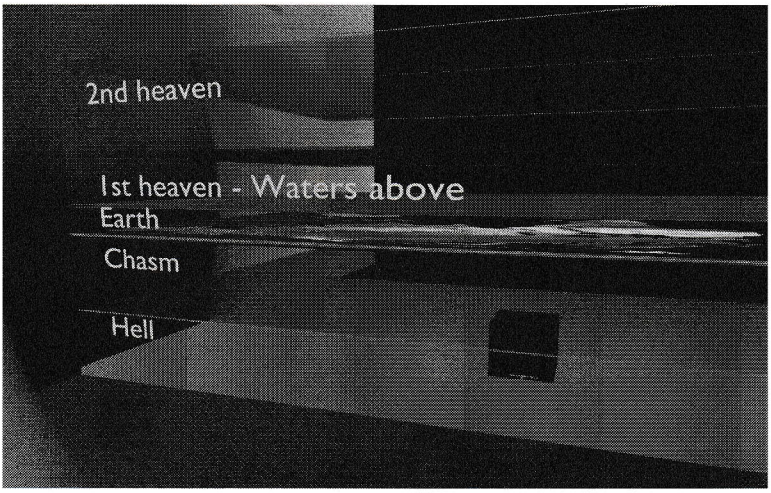
Earthquakes

At this point, the question about the origin of earthquakes is almost self-explanatory, but deserves an own title. Like the humming and vibrating dunes, earthquakes are essentially perturbations in the aether. Most earthquakes occur in areas close to mountains, since mountains are the concentration points of aethereal vibration. Animals are known to be the best predictors of an impending earthquake. Cats and dogs seek a place to hide, birds stop singing, and the whole animal world seems to be "frozen" – If that happens you and you live in a seismic area, then there is a high chance that it's going to shake soon. The senses of animals are in many ways sharper and more sensitive than those of the human. Cats, dogs, birds, and perhaps 99,9% of the animal kingdom are sensitive to magnetic waves, which is aethereal vibration. Animals clearly sense perturbations and changes in the aether, and realize the impending danger, which is why they seek shelter before the earthquake.

"For a fire is kindled in mine anger, and shall burn unto the lowest hell, and shall consume the earth with her increase, and set on fire ***the foundations of the mountains.*** *"*

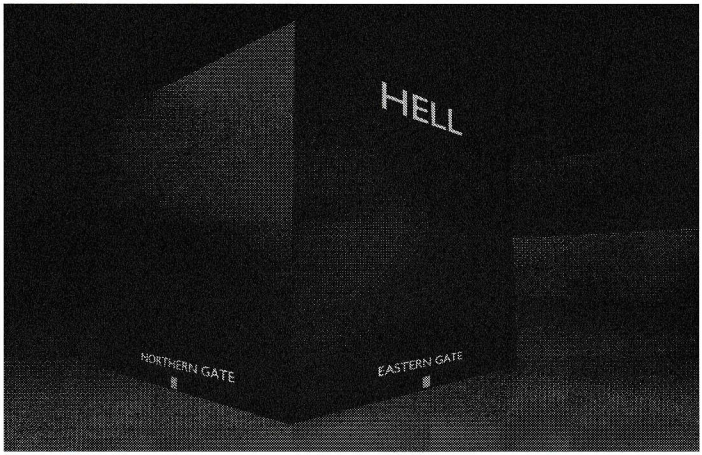
Hell

Hell is a sub-domain/chamber situated in the lowest section of the complex.



Pic.17

In picture 17 we can see the lowest section named Hell. On the bottom of Hell is a layer of Darkness, or physical matter, which lies on a firmament. Since the sub-domain of Hell is not interacting with matter, it may be situated on the same firmament as Darkness.



Pic.18

Picture 18: The sub-domain of Hell is located in the lowest section called Hell. Like all domains, Hell is a cube like domain with its own perspective and repetitive space. Hell has no open sky above; the sky in Hell is pitch black. But

that is perhaps the smallest problem: Since it is situated so close to the pillars of the Earth, aethereal vibration is extremely intense and rough, which makes a person feel heavy and uncomfortable. The strong aethereal vibration makes Hell also a hot place. And on top of it all, it is the habitation of ugly and violent demons who have nothing but pure and utter hatred for people who have come to dwell with them in Hell.

Enoch, who saw Hell with his own eyes, describes:

"And I measured all the earth, its mountains,hills, fields, woods, stone, rivers and everything that exists. I wrote the height from the earth to the seventh heaven, the depth of the lowermost hell, the place of condemnation, and the ***supremely large hell****, open and weeping.*

The cube in picture 18 has a side length of around 2000 kilometers/1300 miles, roughly the size of New Jerusalem. It has a ground area of about 70% of the United States, Alaska excluded, which indeed can be described as quite large.

Enoch continues:

And I saw how the prisoners were in pains, looking forward to endless punishment;i recorded all those who have been condemned by the judge,all their sentences, and all their corresponding deeds. I saw all those from the age of my ancestors, with Adam and Eve. I sighed and burst into tears. I said concerning their disreputable depravity, 'Oh how miserable is for me my incapacity and that of my ancestors!' And I thought in my heart and I said, 'How blessed is the person who has not been born, who has not sinned before The Face of The Lord, so that he will not come into this place nor carry the yoke of this place.'

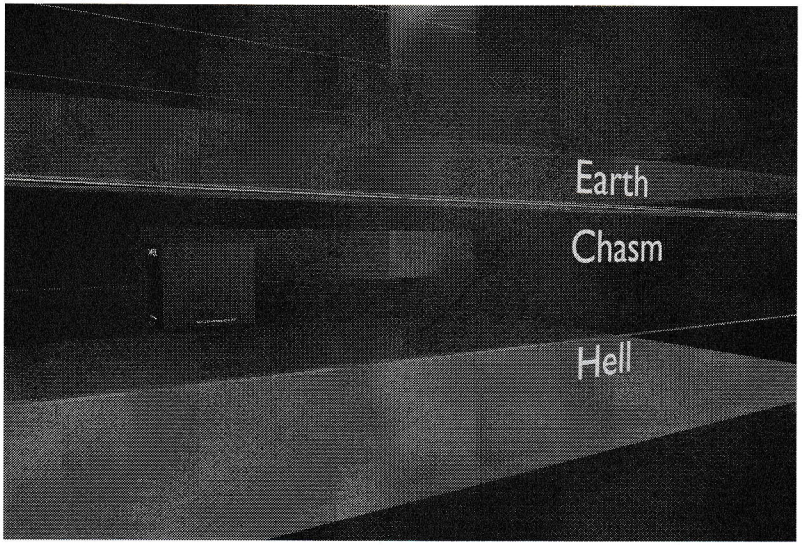
I saw the key holders and the guards of the gates of hell standing, as large as serpents, with their faces like lamps that have been extinguished, and their eyes aflame, and their teeth naked down to the breasts. I said to their faces, 'It would have been better if I had not seen you, nor heard about your activities, nor that any member of my tribe had been brought to you. To what a small extent they have sinned in this life, but in the eternal life they will suffer forever.'

But Hell is not only a place of torture for people - it also harbors the headquarters of the Satanic Empire, which can be compared to an own civilization, including streets, buildings and many other features we have on earth. Moreover, Hell has its own military, a demonic hierarchy, and a strict, harsh, and unforgiving government system. The biggest crime in the Empire of Satan is telling the truth, for it is build upon lies, deception, and manipulation.

According to some sources, the punishment for demons who share any truth with people on Earth is skinning alive.

Technically, Hell is the unofficial capital of the world. All governments, all major institutions, the Vatican, the Jesuits, all major religions and denominations, the media, the music industry, the movie industry and much else are being run from Hell. Many major geopolitical events, including wars, are being designated and plotted in Hell decades before they "surprise" the world stage. Nevertheless, God is in control of everything, and its God who has the last word – the Devil cannot do more than God allows him to.

Sheol

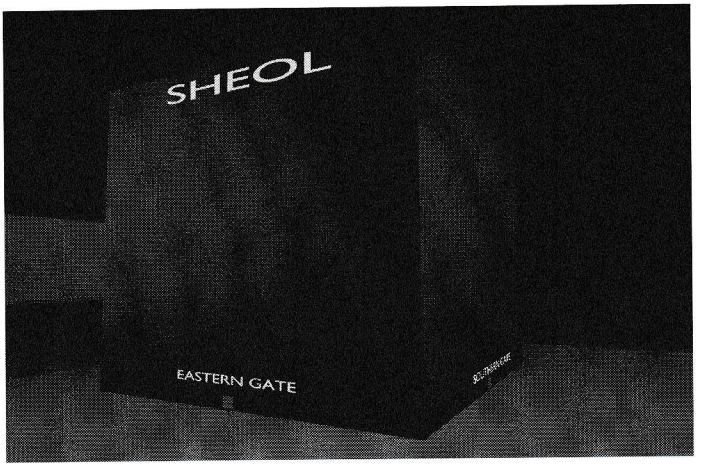


Pic.19

"And thence I went to another place, and there was a great mountain of hard rock. And there was in it four hollow places, deep and wide and very smooth. How smooth are the hollow places and deep and dark to look at. Then Raphael answered, one of the holy angels who was with me, and said unto me: 'These hollow places have been created for this very purpose, that the spirits of the souls of the dead should assemble therein, yea that all the souls of the children of men should assemble here. And these places have been made to receive them till the day of their judgment and till their appointed period, till the great judgment comes upon them."

The Book of Enoch 22 : 4

Sheol is another sub-domain, or chamber, beneath the Earth. Unlike Hell, Sheol is situated in Chasm, in the second lowest platform between Hell and Earth. In this illustration, Sheol has the same dimensions as Hell, roughly 2000 kilometers / 1300 miles.

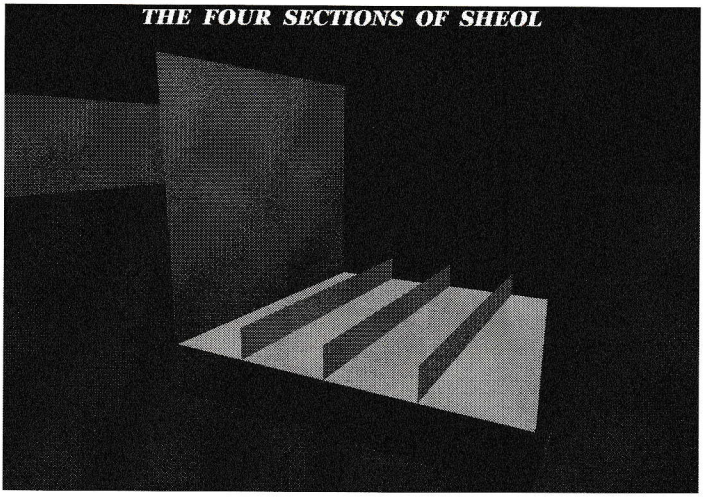


Pic.20

Unlike Hell, Sheol is not a dwelling place of demons; Sheol is not hot, since it is higher up; Sheol is essentially a huge waiting room, where people who are not saved are waiting for the Judgment Day at the end of the age, which is around 1000 years after Christ's second coming. Enoch describes four separate sections of Sheol:

"Then I asked regarding it, and regarding all the hollow places: 'Why is one separated from the other?' And he answered me and said unto me: 'These three have been made that the spirits of the dead might be separated. And such a division has been make for the spirits of the righteous, in which there is the bright spring of water. And such has been made for sinners when they die and are buried in the earth and judgment has not been executed on them in their lifetime. Here their spirits shall be set apart in this great pain till the great day of judgment and punishment and torment of those who curse for ever and retribution for their spirits. There He shall bind them for ever. And such a division has been made for the spirits of those who make their suit, who make disclosures concerning their destruction, when they were slain in the days of the sinners. Such has been made for the spirits of men who were not righteous but sinners, who were complete in transgression, and of the transgressors they shall be companions: but their spirits shall not be slain in the day of judgment nor shall they be raised from thence."

The Book of Enoch 22 : 8 – 13



Pic.21

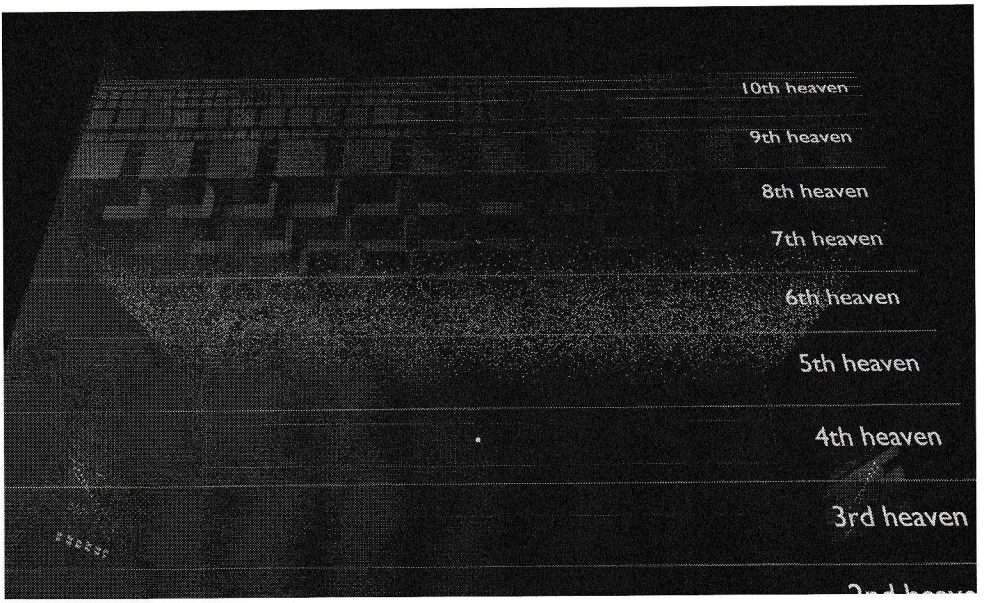
Sheol has four hollow spaces divided by walls. One of the sections is for the righteous. It has a shining fountain of water to make their abidance therein comfortable. The other three sections are for the less-righteous.

Aside from the most common sub-domains Hell and Sheol, there are many other domains beneath the Earth mentioned in the Books of Enoch.

The Father's House and the Chambers of the Sun

Our next point is by far the most exciting in this book - it deals with the question, Are there other world aside from this one, and if yes, are there people dwelling there? The answer is – YES. There are many worlds in the universe which are inhabited by people. In the previous titles, we have discussed the motion of Sun and Moon. The Sun goes through portals in the West and enters a chamber which is situated above the visible stars. What we haven't covered in the previous titles is that the heavens 9 and 10 harbor many sub-domains, which are also called "chambers" or "mansions". It is likely that the eighth heaven has at least some chambers in it, but we're going to stay focused on the heavens 9 and 10.

"In my Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you." *John 14 : 12*



The heavens 9 and 10 are sub-divided into several platforms; each platform contains chambers;

NOTE: The pictures above is just a suggestion of how the chambers may be distributed, and a demonstration of the general principle. It is also meant to demonstrate that the domain/sub-domain system allows to use space way more efficiently and way more diversely and imaginatively than the official idea of spherical planets floating in an infinite, yet inefficient and boring universe: The lowest chambers in the picture have a side length of around 2200 kilometers, around the size of New Jerusalem, also referred to as The Holy City. The chambers above have a side length of around 550 kilometers. The layer above has chambers of around 1100 kilometers side length. The most upper layer contains chamber of around 270 kilometers side length. In the picture above, there are four different chamber sizes

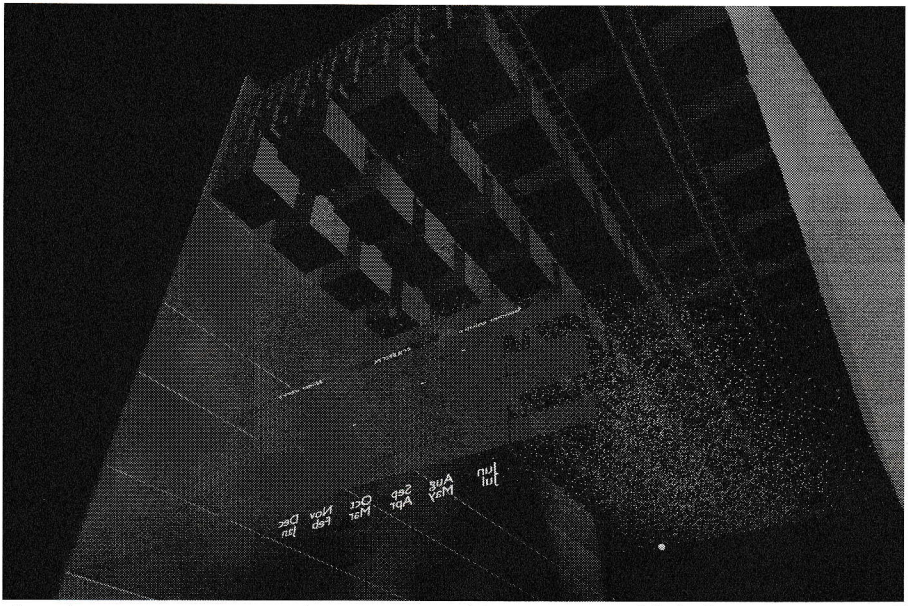
1) The biggest: Around 5 000 000 square kilometers, which is roughly 70% the size of the United States, Alaska excluded. It shows 72 two of these chambers on one layer(the lowest) .

2) The layer above shows around 1800 chambers the size of 550 km * 550 km, which is about the size of Great Britain each.

3) The next layer is packed with around 400 chambers the size of 1100 km *

1100 km, which corresponds to the area of France and Spain combined each.

4) And the uppermost layer illustrated harbors around 7000 chambers with an area of 270 km * 270 km, which is roughly the size of Hungary each.



A chamber acts as a continuous, repetitive space which has no perceptible walls. In addition, each chamber has its own perspective, horizon line, and a separate time flow. In other words, a chamber is a world (or realm). Note that the sizes and the distribution of the chambers may be different than illustrated.

When Christ ascended to Heaven, he said the following:

In my Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto myself; that where I am, there ye may be also."

John 14 : 2 - 3

Mansions is another term for chambers or sub-domains. Christ is saying that he is going to Heaven, and that he is going to prepare a chamber, or several chambers, as a dwelling place for his people.

"And after that I saw all the secrets of the heavens, ***and how the kingdom is divided****, and how the actions of men are weighed in the balance. And* ***there I saw the mansions of the elect and the mansions of the holy****, and mine eyes*

saw there all the sinners being driven from thence which deny the name of the Lord of Spirits, and being dragged off: and they could not abide because of the punishment which proceeds from the Lord of Spirits."

The Book of Enoch 41 : 1 - 2

Enoch saw how the Kingdom is divided, meaning, the exact distribution and sizes of the chambers. He is also referring to the "mansions of the elect" - mansions is the other term for chambers. The righteous and elect have their own "worlds" in the Kingdom of God, as each chamber is a world.

*"And I saw **the chambers of the sun and moon, whence they proceed and whither they come again**, and their glorious return, and how one is superior to the other, and their stately orbit, and how they do not leave their orbit, and they add nothing to their orbit and they take nothing from it, and they keep faith with each other, in accordance with the oath by which they are bound together."*

The Book of Enoch 41 : 5 – 6

The portals in the West lead to chambers above the visible stars. The Sun and the Moon go through the western portals and enter their chambers in the uppermost heavens, where they stay for several hours. Afterwards, they return and go through another set of portals in their chamber and enter our visible heaven through the portals in the East. Sun and Moon have their stations in the chambers of heaven, but we don't notice their absence because the chambers have a separate time flow. The Sun enters through the eastern portals at the exact same time as they leave through the western portals, which makes their observable path seamless.

The Chambers of the Elements

We have already mentioned the portals of the winds, the portals of snow, of rain, of mist, of clouds, of dew, of hail, of lightnings etc.. All of the elements are created in special chambers above the visible stars and sent down to the first heaven via portals in the first heaven. From the first heaven, the elements are diffused over the Earth via exit-portals in the atmosphere.

Enoch describes the chambers of the elements, which he sees in the uppermost heavens above the visible stars:

"And there mine eyes saw the secrets of the lightning and of the thunder, and

the secrets of the winds, ***how they are divided to blow over the earth****, and the* ***secrets of the clouds and dew, and these I saw from whence they proceed in that place and from whence they saturate the dusty earth****."*

Henoch 42 : 3 – 4

In the verse above, Enoch mentions the chambers in which the clouds and dew are created ("*..that place from where they saturate the earth..*". "Places" is another term to describe chambers.

"And there I saw closed chambers out of which the winds are divided, the chamber of the hail and winds, the chamber of the mist, and of the clouds, and the cloud thereof hovers over the earth from the beginning of the world."

Enoch 41 : 4 – 5

The verse 41 : 4 - 5 could not be more accurate and revealing. Enoch mentions closed chambers in which the winds are created to be sent forth to Earth. He also mentions the closed chambers of mist, hail, and clouds. Like we mentioned earlier, the clouds are "sprayed" into the atmosphere via exit-portals, but they are created in a special chamber above the visible stars. The same goes for all elements in the out atmosphere.

Enoch continues:

"I wrote down the treasuries of the snow, the storehouses of the cold,and the frosty wind. I observed how, depending in the season,their custodians fill up with them, and their treasuries are not emptied. I wrote down the sleeping chambers of the winds, I observed and saw how their custodians carry scales and measures. First, they place them in the scales, secondly in the measure, it is by measure that they release them skillfully into all the earth, lest the earth should be rocked by violent gusts."

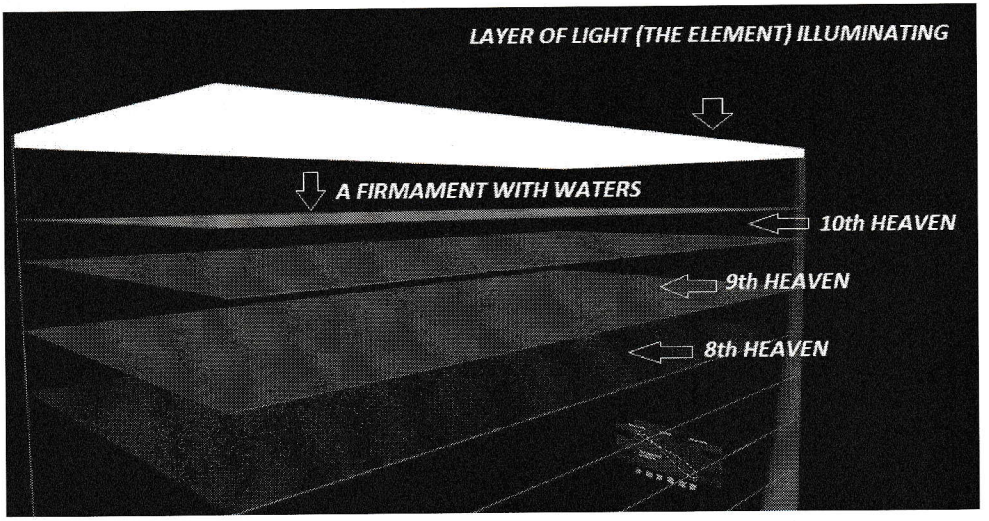
The Second Book of Enoch

Again, Enoch describes his encounter in the upper heavens. He describes the chambers of the elements, and how they are operated by angels. The verse also clearly describes how the "custodians" carefully diffuse the winds over the Earth via portals. He also encounters the treasuries of snow, and of the frosty wind, which are also created in chambers.

All of the chambers illustrated are sub-domains. And just like the Garden of Eden does not interfere with our world despite being situated on Earth, the chambers in the Kingdom of God do not interfere with the main-domain(s). Each chamber is comprised of three domains – one for Light, one for Lightning, and one for Darkness, yet the domains of the chambers are not interfering with the general, main domain(s) which contains the heavens and the Earth.

The Throne of God

Aside from the chambers, the 10th heaven is a platform which has the same dimension as our Earth. It has a similar perspective and horizon line as we know it on Earth, since the foundation which draws light downward in the heavens 8-10 is the firmament which divides the heavens 7 and 8. Furthermore, the 10th heaven may have something comparable to our vegetation, it has an infrastructure, building-like structures, in other words - it's a celestial "civilization" (not to confuse with our corrupted and evil earthly civilization). It is safe to assume that the celestial civilization is light years ahead of anything that the most ardent science-fiction fans can even dream of, as it was build by God himself, and unlike science-fiction fantasy, this is actual reality. The 10th heaven has also its own illumination. The illumination in the 10th heaven is the layer of Light (the element) which is stored at the extreme top of the universe. The layer of Light is radiating a high frequency, bright light, different from the light on Earth.



It is also very likely that, like down on Earth, there is a firmament containing waters between the surface of the 10th heaven and the layer of Light, which is the light source. This would cause an additional refraction of light, similar to

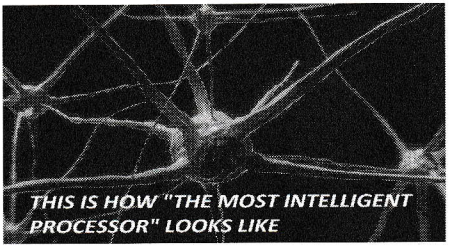
that on Earth. Like on Earth, the sky in the 10th heaven would appear blue (since blue is the most suited color to adorn the expanse of the heaven with). If an observer in the 10th heaven looked around, he would see a blue sky, but he would not see a Sun like on Earth, instead, the illumination would proceed right overhead of each observer individually. This way, there would be no shadows, as the illumination would be in the exact zenith for each and every object, yet the sky rings round would be blue.

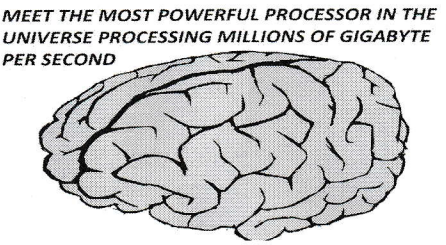
Now to the premise of this title: There is a divine celestial civilization in the lofty heights of the 10th heaven; it is beyond anything we could even dream of on Earth – everything is fundamentally different from this rough world down here, and that is where God himself dwells. It is said that the Throne of God is covered in clouds; it is also said that God and the "Lamb" (which is Christ) are going to descend on a cloud from heaven. So what can we gather from that? - First - the cloud covering God's Throne is condensation created by a difference in the pressure. God's Throne is a hovering platform made of aethereal vibration, similarly to the firmaments. This aethereal vibration causes a contraction of one of the three elements; as a result, it creates a solid platform hovering in the aether. And since the hovering platform is made of aethereal contraction, it also causes a manifestation of condensation around it, also referred to as clouds. God's Throne is not the platform itself – The Throne is situated on the platform. On the second coming of Christ, God will descend on this hovering solid platform created by vibration, which is why it said that God will descend on a cloud.

The Word of God and Salvation

Reading through the previous titles, one may have the question – Why are there people described in Hell, in Sheol, in Heaven; technically, they have died on Earth, so how is it possible that they are described having physical features indicating physical bodies? - And this is perhaps the greatest misconception that we have today. Our modern science and education is based on the idea that our entire personality is inside of our head; in the brain, to be correct. We've been indoctrinated into the concept of the brain being the seat of our mind, our personality, our memories, our intellect, and our emotions and the majority of people don't see a problem with it; but guess what – there is a huge problem with the official theory. Try to imagine you have no idea about human anatomy or how the organs roughly look like. Now imagine that someone shows you a brain and a liver (doesn't have to be human organs). Now the big question – Could you tell the differences between the liver and the brain? Most people

would say that the two organs have a different color, a different surface structure maybe – that's about it; one could go further and find another dozen of "differences", but a person who has no idea of how a brain and a liver looks like would not see a major difference. Both organs are basically "meat" comprised of 75-80% of water, like most organs in the body. Now imagine your surprise when you get told that you missed the major difference between the two organs, namely, the one organ is basically a filter regulating the blood content, but the other, now fasten your seat belt, is an astronomically powerful computer with an unlimited capacity, capable of processing millions of gigabyte per second; it contains billions of gigabyte of information, including your whole personality, your memories, impressions, emotions, and feelings.





I don't know about you, but I for one see a problem with this: Fist, it is an ethic problem - claiming that the whole personality is nothing but a few pounds of meat, of which 60% are fats, is a disparage towards every creature that has a personality, as it's literally being reduced to a chunk of meat.

And the other problem with the official brain theory: The structure of the brain is not crucially different from the structure of the liver, it is not different from lung tissue, and all in all, the brain is just a regular organ inside of our body, just like any other organ. It has its own function, but its function is certainly not to process astronomical amounts of information each second. The official concept of synapses traveling within the brain at astronomical speeds, and bouncing off of each other thereby magically exchanging huge amounts of information is even more absurd and incoherent than the official model of the atom – Scientists and evolutionists have no explanation as to how in this beautiful world is a chunk of meat and fats capable of saving, transferring, and processing information, let alone the alleged staggering amounts of it? This is something that is still not explained by official science, and guess why – because it is impossible for organic tissue to fulfill the named functions; meat is meat, it is not a computer, it lacks the base for the processing of data and information.

The currently endorsed idea of the brain being the seat of the mind and

personality is slightly over 100 years old. Throughout most of human history, the seat of the mind and personality was believed to be the soul. In our current corporate science, the role of the soul has become irrelevant in the understanding of the world and of ourselves. If we accept the brain-hypothesis, then there is no necessity for a soul, and the question of the soul becomes a "religious and mythical" subject. In fact, most people today could not tell what exactly is the soul and what is it good for. But that doesn't mean that there are not some theories out there – perhaps the most spread belief is that the soul is the supernatural seat of our feeling and emotions, the part of us which loves and feels compassion. The truth is, the soul is our entire personality, including every single aspect of our consciousness and self-awareness. It is our soul that thinks and feels; it is our soul that processes the astronomical amounts of information, including visual and acoustic information; it's the soul that contains our impressions, emotions, feelings, memories, and our entire personality – it is not the brain.

So how exactly does a soul work and how does it process information? - We live in a universe based on the principle of Geometry-Frequency-Resonance. There is nothing that is not related to this rule. Information can be encoded and processed in the form of frequency and/or geometry; that is how the computer works – the notebook doesn't have spherical synapses shooting across the processor, instead, all of the processes are encoded in frequency, and in the form of 1s and 0s (which is also a form of frequency). Our soul is made of light; not the element of Light, but a non-physical geometric fiber, similar to visible light. And it's that geometric fiber of the soul that processes all the information, and which contains our entire personality, and all of it is encoded in the geometric fiber of the soul. Every human, every animal, every creature is in fact a "living" database similar to a program, and this database is called the soul.

Next question is – Where is the soul? Do we carry the soul with us inside of our bodies? - Did you know that almost throughout the entire human history, the soul was believed to be outside of the body? Most people are familiar with the saying "the eyes are the window to the soul", but have you ever wondered why is there a necessity for a window to the soul in the first place, isn't the soul right behind the eyes? - No, the saying "eyes are the window to the soul" implies that the soul is at a different location than the body itself. In the Christian worldview, the human is made up of three components: The body, the spirit, the soul. The spirit is believed to give life to the body; the spirit is also believed to be the link connecting the body with the soul, while the personality itself is contained in the soul.

So how does it work? - The soul is a database and processor situated in the information field of the world, which is in the sky above. All thinking processes

occur in the soul. The spirit is another non-physical geometric structure which suffuses our body, and it's also the spirit which gives live and strength to our body. It is the spiritual structure within our body which brings about the heartbeat, the blood circulation, muscular contraction and so on. The veins have a geometric non-physical string running along them; it's this geometric string which creates an aethereal torque which mobilizes the blood in our body and makes in circulate. And all of the spiritual strings which bring about the circulation converge in the heart. The heart itself is suffused by a geometric fiber which creates aethereal waves which we know as the heartbeat. The pulse is a sequence of aethereal waves "reflected" by the geometric fiber suffusing our heart and our venous system. The heart does not pump all the amount of blood through the endless venous system of the human body, and that 70 times per second as scientists claim. **The physical heart is the seat of the venous system.**

What about the brain? What function has the brain? - Our muscles are also suffused by a non-physical geometric fiber, also known as spirit. It's this fiber in the muscles which causes muscular contraction. For example, if you want to tense your bicep, you change the structural geometry of the fiber in the muscles of the bicep; this structural geometry "reflects" an aethereal frequency (similar to a magnet), and this reflected aethereal vibration causes the contraction of the bicep and gives strength and life to the body. All muscles are suffused by geometric light-strings of which all converge in the brain, as the brain is the seat of the muscles, not the seat of the mind. The heart is the seat of the blood circulation; the brain is the seat of the muscles; and the soul, which is outside of the body, operates the body and gives the impulses to the brain. - **The brain is the seat of the muscle system. It's not the seat of the mind and personality. All muscular strings converge in the brain – that's the whole function of the brain.**

Now to the question – how exactly do body, spirit, and soul work together? - The soul is the seat of the mind; the spirit is a geometric structure suffusing our body; and the body is earth. As soon as the spirit leaves the body, the body begins to decompose, as it is no longer maintained by the spirit. At the moment of clinical death, the spirit is being removed from the body. As a result, the heart and the blood circulation stop due to the fact that it's been the geometric fiber which was creating the heartbeat and the circulation in the first place. The moment the heart stops is the moment when the spiritual structure has been removed from the body, and the person is declared clinically dead. Throughout our entire live, it's the spiritual structure that keeps us alive and gives us physical strength. But there is more to the spirit – the spirit and the soul are connected. One could say that the spirit is an external component of the soul.

Aside from providing vitality to the body, the spirit also absorbs information in the form of geometry and frequency, and transfers it to the soul, where the information is processed and transferred back to the spirit, and the spirit operates the body accordingly. In other words, there is a constant exchange of huge amounts of information going on between the soul and the spirit. We perceive this reality through our body, but in reality, we are outside of the body. Our mind, which is thinking right now, is not part of the body. Technically, the body is a remote controlled vehicle, and once the spirit leaves the body, all vital processes stop and the body returns to earth, where it came from.

But what happens next, after the clinical death? - After the person has been declared clinically dead, the soul and the spirit continue their existence. After the spirit has been removed from the body, it's brought to a special place where the spiritual structure undergoes a "restoration process". The spiritual structure has been carrying the body throughout the entire life, and the body is made from Darkness (earth/physical matter). In the restoration process, this "disembodied" spiritual structure is being restored with the element of Light, instead of Darkness. During this process, the entire spiritual structure is being clothed in Light until the spirit has a completely restored body made of Light. From then on, the person is fully awake and fully conscious, and perceives the world around him as physical reality, although it may be slightly different from the previous reality. All in all, the "deceased" person is being transferred to the domain of Light. During the restoration process, the mind may remain in a sleep-like state: the soul can have a beautiful dream, it can have a "nightmare", but it can have no dreams at all until the person wakes up fully restored on the domain of Light.

After the restoration process, the person is being sent to it's destination. From there, the person is being sent Hell, to Sheol, or to somewhere else.

What is salvation?

There has been a lot of debate around the Christian concept of salvation. Our current worldview makes it difficult to relate to ancient messianic concept of salvation through a sacrifice. In our modern world, which is dominated by humanism, New Age beliefs, and a fraudulent science body, it is nearly impossible to reconcile the idea of sending the own son to death in order to forgive someones debts. This doesn't make sense to most people. Why would God not just forgive people and let them go to heaven? Why did he have to sent his son and his Word to die a painful death before he could "forgive"? - And

again, it is not the ancient messianic concept that is ignorant and illogical - it's our own ignorance.

As we know, the Ancients practiced sacrifice offerings, but the practical and mechanical aspects behind the sacrifice offerings have been forgotten in the course of history, which makes them seem barbaric and ignorant to the modern western worldview. Why would anyone want to "sacrifice" an animal? - The Ancients sacrificed because they understood the mechanisms of Creation better than we do now. The thing is, a sacrificed animal releases an information field above the Earth. Those who accept the sacrifice connect their souls with this newly released information field, and as they connect to the information field, their souls are being healed and cleansed. It has been an established custom between God and his people that the people would periodically sacrifice a clean animal, since only clean animals cleanse the soul from sin.

"For a person brings one of the clean animals to make sacrifice on account of sin, so that he may have healing for his soul. If he brings it to the sacrifice from clean animals and birds and cereals, then there is healing for that person, and he will heal his soul."

The Second Book of Enoch

ATTENTION: I do not endorse or promote animal sacrifice in this work. Only point out the original idea behind it.

But there was a covenant between God and his people – God promised his people a Messiah, who would be God too, to come and to lay down his life in order to heal and to cleanse his people from all sins – the ultimate sacrifice after which animal sacrifice offerings were no longer necessary, as there would be an ultimate, eternal salvation and healing from sin. God's people have accepted the sacrifice of Christ, as that was the original covenant between them and God. Other people rejected it, since God's original covenant between him and his people was foreign to them.

When Christ died, there was established an invisible information field above the Earth, and who accepts Christs sacrifice connects his soul to this information field. In the process, the field starts go grow a "fruit" within the soul of the believer. Some people grow big fruits, some grow small, and some don't grow fruits at all – all depending on one's soul.

Verily, verily, I say unto you, Except a corn of wheat fall into the ground and dieth not, it abideth alone: but if it die, it bringeth forth much fruit.

In the following verse, Christ refers to the information field being spread out

upon the Earth....

"His disciples said to him, "When will the kingdom come?" Jesus said, "It will not come by waiting for it. It will not be a matter of saying 'Here it is' or 'There it is'. Rather, ***the kingdom of the father is spread out upon the earth, and people do not see it."***

Gospel of Thomas, saying 113

But there is even more to Salvation – people who are saved by Christs sacrifice go to heaven, and obtain eternal life on the domain of Light. But people who reject Christs sacrifice descend into the Earth, where they will be awaiting the Judgment Day.

"And after that I saw all the secrets of the heavens, and how the Kingdom is divided, and how the actions of men are weighed in the balance. And there I saw the mansions of the elect and the mansions of the holy, and mine eyes saw there all the sinners being driven from thence which deny the name of the Lord of Spirits, and being dragged off: and they could not abide because of the punishment which proceeds from the Lord of Spirits."

The Book of Enoch

At this point, I can only encourage the reader to go into the Gospels and to do your own research. The Kingdom of Heaven is an information field which was established by Christ through his death. It is hovering upon the Earth forever, as it is eternal, and people who get connected to it through Christ experience inner peace and become part of the Kingdom – in the process, their whole nature changes for the better: according to countless reports, people who get saved lose all their bad habits and addictions, and generally, become better and and more pleasant people. It is even reported that people were healed from homosexuality. Although all of the named is a large scale worldwide phenomenon experienced by hundreds of thousands, we will never hear about it the mainstream media as it is run by Satan, and Satan wouldn't be Satan if he hadn't made it his number one priority and goal to hide, deny, and undermine God's salvation through Christ in order to have as many people perish with him as possible.

People who become part of the Kingdom don't experience death (death is not referred to "nonexistence" - death is the absence of God, of joy, of peace, of hope, and of love, instead, death is a state of regret, shame and spiritual terror, all while death is experienced in full consciousness). People of the Kingdom continue their life in the upper heaven, in the form of Light, after their clinical

departure on Earth. And this is what God's salvation through his Word is about. The following verses by Apostle John confirm everything stated above.

"In the beginning was the Word, and the Word was with God, and the Word was God.

The same was in the beginning with God.

All things were made by him; and without him was not any thing made that was made.

In him was life; and the life was the light of men.

And the light shineth in darkness; and the darkness comprehended it not.

There was a man sent from God, whose name was John.

The same came for a witness, to bear witness of the Light, that all men through him might believe.

He was not that Light, but was sent to bear witness of that Light.

That was the true Light, which lighteth every man that cometh into the world.

He was in the world, and the world was made by him, and the world knew him not.

He came unto his own, and his own received him not.

But as many as received him, to them gave he power to become the sons of God, even to them that believe on his name:

Which were born, not of blood, nor of the will of the flesh, nor of the will of man, but of God.

And the Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the Father,) full of grace and truth."

John 1 : 1 – 14

Christ is the co-creator and the Word of God which was with God in the very beginning of Creation. The Word of God is also the aether, as the aether was made according to the "Word". The Word of God is NOT the Bible nor anything else aside from the Son of God who later becomes known as Christ (the Son of God is basically a copy of the Father, he was not conceived or begotten in the traditional sense). And it's the Word of God who came into this world and established the information field above the Earth, also known as the "the spiritual Kingdom of Heaven", so that we get saved and healed. This information field is also referred to as "Net" in the Gospel. The Gospel is full of allegories like, "*The fisherman cast out his net into the sea...*" - Christ himself is the fisherman; "the net" is the information field which he established through

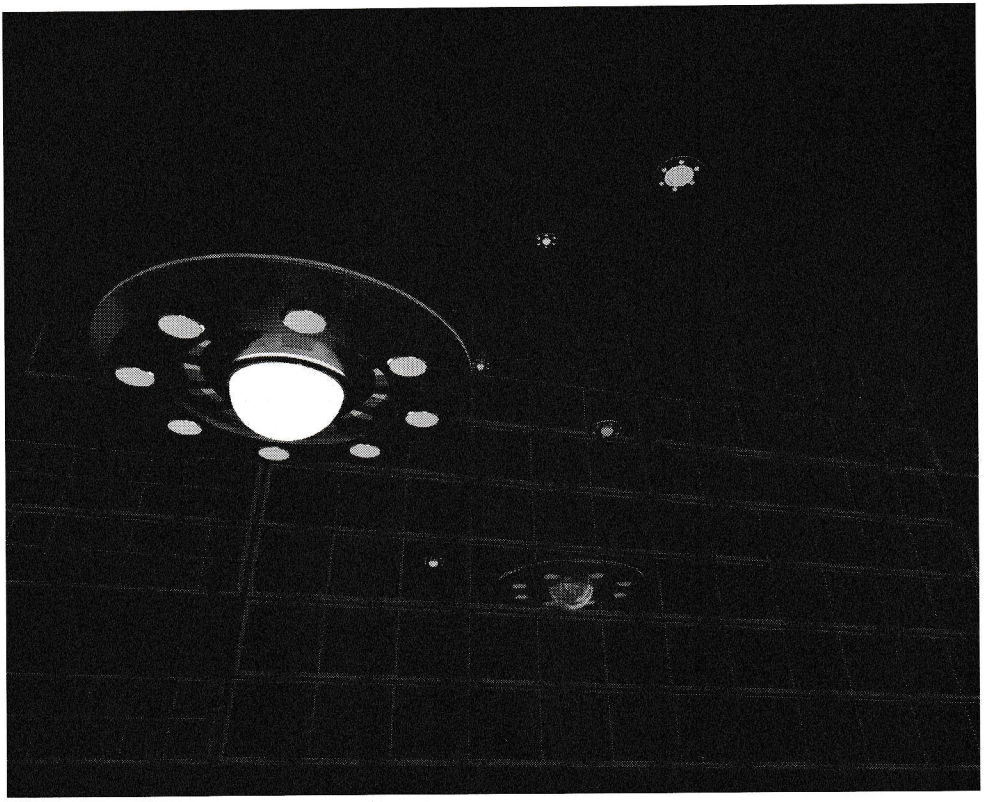
his sacrifice, and the sea is the world.

"Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by me."

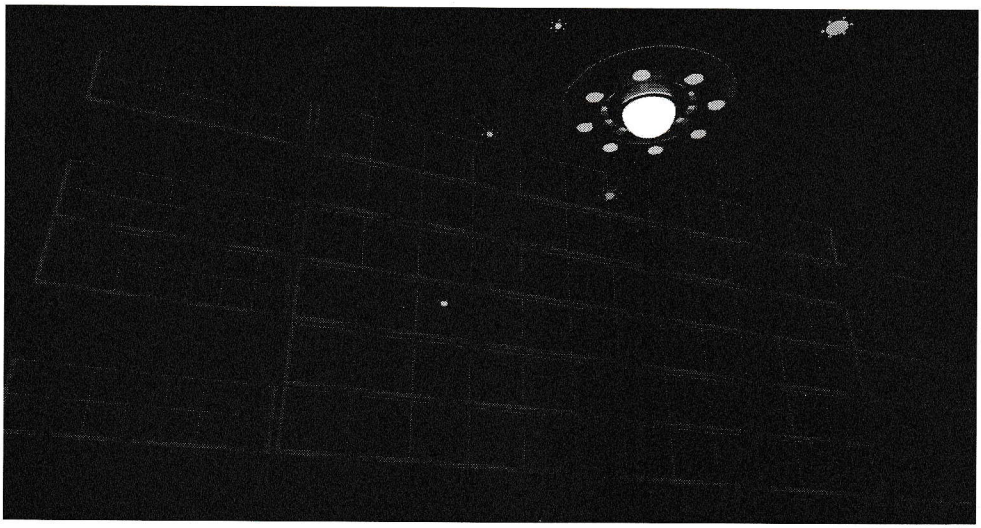
John 14 : 6

..this is a subject that deserves its own, extensive chapter in a separate, extensive work. We will continue this subject, as well as many other topics in a future work. As for now, we have arrived at the end of the first value. We have seen that all astronomical observations can be explained on the flat rectangle – the globe is not the only working model as scientists claim, and this is one of the main goals of this work - to show that everything can be explained on the rectangle, and to end the monopoly of the globe being the only working model. There is solid proof that the Earth is not a spinning globe. (read first chapter)

We have seen that Heaven and Hell are real, and that there are many, many worlds existing parallel to ours. Our life on Earth is short and, for the most of its part, superficial; our time on Earth is just one heartbeat compared to eternity, and most of our existence will take place after this life (at least in this age), whereas our whole life on Earth will remembered as an extremely short period of time, and most of our efforts to gain wealth, status, and to please this world in this life will be seen as vain and shortsighted in the eternal life. The best, and also the smartest, thing we can do in this life is to ensure our well-being in the eternal life, on the domain of Light, after our departure from this world.



Who is not familiar with the saying: "Truth is stranger than fiction", but how many can fathom how "strange" the Truth is. What if the world you live in turned out to be a giant, highly advanced facility which was built only a few thousand years ago by a supreme being? Wouldn't it be the wildest "sci – fi" scenario that you could imagine? Now imagine that this is not a fantasy, but reality. The universe was built around 12-13 (whereas humans are only around 7.500 years old) thousand years ago by a supreme being, who later communicated with the prophets of the Old Testament. The creator was moving in the invisible things, outside of time and space as we know it, in an environment that we cannot grasp with our created minds. At some point, He decided to establish a visible Creation as a dwelling place. He had no adviser or manual, but and developed, designed, and created everything on his own, according to his own Wisdom, and out of his own will. The universe and we only exist because God "invented" the universe.



The created universe is full of wonders and marvels; of fascinating and unearthly machinery and "spacecrafts" of all kinds and shapes traversing the heavens; it's full of all kinds of intelligent "supernatural" creatures and beasts with superpowers; and it contains many, many different worlds and environments which exceed the wildest imagination; and the Creator of it all is abiding in the 10th heaven, in the Celestial Civilization, on a hovering platform. Do you now begin to grasp what "strange" means? Any fantasy and fiction is doomed to look pale and trivial next to the reality that we live in.
